Spray Booths.**

## Down Draft Spray Booth

Air flow enters via a filtered ceiling and is exhausted through filters in the floor pit. This configuration is perfect for those looking for a permanent solution and the best spraying environment.

## Open Face Spray Booths (Industrial)

Air enters via the open front, across the painter and/or parts being coated and into a rear filter system. This system is perfect for versatility, efficiency and convenience.

## We Also Provide:

- Paint Mixing Rooms
- Prep Stations
- Bench Booths

At Spray Booth Solutions Inc. we specialize on spray booth manufacturing and installations. We have over 25 years of experience building and designing high quality spray booths for a wide variety of applications. Our products serve the daily demands of auto body shops, car dealers and aerospace purposes.

We understand that not all spray booths are alike, and for that reason we focus on quality craftsmanship. Most importantly, we strive to meticulously install each spray booth and equipment to regulations.

## We Manufacture For:

- Aerospace
- Automotive
- Furniture Manufacturing
- Industrial Manufacturing
- General Manufacturing
- Large Equipment Manufacturing

## Semi Down Draft Spray Booth

Air flow enters via a filtered ceiling and is exhausted via the filtered rear walls. This is another flexible, high quality option with no need for a floor pit system. (pressurized optional)

## Side Down Draft Spray Booth

Air flow enters via a filtered ceiling and is exhausted via filtered lower side walls. This is a flexible, high quality option with no need for a floor pit.

## Front and Reverse Flow Spray Booth

Air enters via a filtration system at the rear (Reverse flow) or front (Front flow) of the booth and is exhausted via chambers located at the opposite end.
